

# Perle Gigabit Media Converters

---

## Installation Guide

**SRS-1110-Gxxxxxx**

**SRS-1110-Fxxxxxx**

**SRS-1110-SFP**

# Preface

## Audience

This guide is for the network or computer technician responsible for installing Perle SRS-1110 Gigabit Media Converter. Familiarity with the concepts and terminology of Ethernet and local area networks is required.

## Purpose

This document describes the hardware and physical characteristics of the Perle SRS-1110 media converter. It covers hardware features as well as installation and operation of the SRS-1110.

## Package Contents

- SRS-1110 media converter with attached DIN Rail mounting bracket
- Installation Guide (this guide)

## Document Conventions

**Note:** Means reader take note: notes contain helpful suggestions.  
**Caution:** Means reader be careful. In this situation, you might perform an action that could result in equipment damage or loss of data.

### Warning: IMPORTANT SAFETY INSTRUCTIONS

Means danger. You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents. Only qualified personnel should connect power to this unit.

Warning - more information is contained within this guide

Warning - equipment rated above 40C. Equipment may be very hot

## Conventions de documents

**Note:** Moyens prendre note: les notes contiennent des suggestions utiles

**Caution:** Moyens faire attention au lecteur Dans ce cas, vous pouvez effectuer une action susceptible d'endommager le matériel ou de perdre des données.

### Warning: CONSIGNES DE SÉCURITÉ IMPORTANTES

Signifie danger. Vous êtes dans une situation susceptible de causer des blessures corporelles. Avant de travailler sur un

*équipement, soyez conscient des dangers liés aux circuits électriques et familiarisez-vous avec les pratiques standard de prévention des accidents. Seul le personnel qualifié doit connecter l'alimentation à cet appareil.*

Warning - more information is contained within this guide

Attention - plus d'informations sont contenues dans ce guide

Warning - equipment rated above 40C. Equipment may be very hot.

Attention - équipement évalué au-dessus de 40C. L'équipement peut être très chaud.

## Cautions and Warnings

**Warning:** Power sources must be off prior to beginning the power connection steps. Read the installation instructions before you connect the unit to its power source.

**Warning:** These devices are open-type devices that are to be installed in an enclosure with a tool removable cover or door, suitable for the environment.

**Warning:** Power supply of the equipment must be rated appropriately (See Appendix for specification with limited power). Limited power means complying with one of the following:

- Class 2 circuit according to Canadian Electrical Code, Part 1, C22.1
- Class 2 circuit according to National Electrical Code, NFPA-70
- Limited Power Supply (LPS) according to EN/IEC 60950-1.
- Limited-energy circuit according to EN/IEC 61010-1

**Warning:** If this equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

**Warning:** In case of malfunction or damage, no attempts at repair should be made by the user. All repairs need to be made by a qualified Perle representative. Do not dismantle this product.

**Warning:** Transient protection shall be provided that is set at a level not exceeding 140% of the peak rated voltage value at the supply terminals to the equipment

## Précautions et avertissements

**Attention:** Les sources d'alimentation doivent être éteintes avant de commencer les étapes de connexion d'alimentation. Lisez les instructions d'installation avant de connecter l'appareil à sa source d'alimentation.

**Attention:** Ces dispositifs sont des dispositifs de type ouvert qui

*doivent être installés dans un boîtier avec un couvercle ou une porte amovible pour outil, adapté à l'environnement.*

**Attention:** L'alimentation électrique de l'équipement doit être évaluée de manière appropriée (voir l'annexe pour les spécifications avec une puissance limitée). Une puissance limitée signifie se conformer à l'un des critères suivants:

- *Circuit de classe 2 selon le Code canadien de l'électricité, Partie 1, C22.1*
- *Circuit de classe 2 selon le Code national de l'électricité, NFPA-70*
- *Alimentation électrique limitée (LPS) selon EN / IEC 60950-1*
- *Circuit à énergie limitée selon EN / IEC 61010-1*

**Attention:** Si cet équipement est utilisé d'une manière non spécifiée par le fabricant, la protection fournie par l'équipement peut être altérée.

**Attention:** En cas de dysfonctionnement ou de dommage, aucune tentative de réparation ne doit être effectuée par l'utilisateur.

Toutes les réparations doivent être effectuées par un représentant qualifié de Perle. Ne démontez pas ce produit.

**Attention:** Une protection contre les transitoires doit être fournie à un niveau ne dépassant pas 140% de la valeur de tension nominale maximale aux bornes d'alimentation de l'équipement.

## Hazardous Location Warnings

**Warning:** This equipment shall be installed in an ATEX Certified enclosure that provides a degree of protection not less than IP54 in accordance with IEC 60079-15 and accessible only by the use of a tool.

**Warning:** The equipment shall only be used in an area of not more than pollution degree 2, as defined in IEC 60664-1.

**Warning:** This equipment is suitable for use in Class 1, Division 2, Groups A, B, C, D, or non hazardous locations.

**Warning:** WARNING-EXPLOSION HAZARD - Do not disconnect equipment unless power has been removed or the area is known to be non-hazardous.

**Warning:** WARNING-EXPLOSION HAZARD - Substitution of any components on this switch may impair suitability for Class 1, Division 2.

**Warning:** Explosion hazard. Do not disconnect while the circuit is live or unless the area is free of ignitable concentrations.

**Warning:** Only for use with Zone 2 ATEX rated SFP modules with T-code that does not exceed that of the product.

## **Avertissements relatifs aux emplacements dangereux**

**Attention:** Cet équipement doit être installé dans un boîtier certifié ATEX offrant un degré de protection au moins égal à IP54 conformément à la norme CEI 60079-15 et accessible uniquement à l'aide d'un outil.

**Attention:** L'équipement ne doit être utilisé que dans une zone dont le degré de pollution ne dépasse pas 2, tel que défini dans la CEI 60664-1.

**Attention:** Cet équipement peut être utilisé dans des environnements de classe 1, division 2, groupes A, B, C, D ou non dangereux.

**Attention:** AVERTISSEMENT - RISQUE D'EXPLOSION - Ne pas déconnecter l'équipement à moins que l'alimentation ait été coupée ou que la zone ne soit pas dangereuse.

**Attention:** AVERTISSEMENT - RISQUE D'EXPLOSION - La substitution de tout composant de ce commutateur peut nuire à la classe 1, division 2.

**Attention:** RISQUE D'EXPLOSION - Ne pas déconnecter lorsque le circuit est sous tension ou à moins que la zone soit exempte de concentrations inflammables.

**Attention:** Uniquement pour une utilisation avec des modules SFP de classe 2 ATEX avec un code T qui ne dépasse pas celui du produit.

# Overview

This document contains instructions necessary for the installation and operation of the Perle Industrial 10/100/1000 rate converting Media Converters (SRS-1110). These products convert a 10/100/1000Base-T cable connection (copper) to a 1000Base-X connection (fiber). The fiber connection can be either single mode (SM) or multimode (MM) and can operate over different wavelengths and distances depending on the model selected (see table below).

Model	Connector	Mode - Distance	Wavelength (nm)
SRS-1110-GSC05	SC	MM – 550 m/1804 ft.	850 nm
SRS-1110-GST05	ST	MM – 550 m/1804 ft.	850 nm
SRS-1110-GSC10	SC	SM – 10 km/6.2 mi.	1310 nm
SRS-1110-GST10	ST	SM – 10 km/6.2 mi.	1310 nm
SRS-1110-GSC10U	SC	SM – 10 km/6.2 mi.	1310 nm
SRS-1110-GSC10D	SC	SM – 10 km/6.2 mi.	1310 nm
SRS-1110-FSC2	SC	MM – 2 km/1.25 mi.	1310 nm
SRS-1110-FST2	ST	MM – 2km/1.25 mi.	1310 nm
SRS-1110-FSC20	SC	SM – 20 km/12.4 mi.	1490/1310
SRS-1110-FST20	ST	SM – 20 km/12.4 mi.	1490/1310
SRS-1110-FSC20U	SC	SM – 20 km/12.4 mi.	1310/1490
SRS-1110-FSC20D	SC	SM – 20 km/12.4 mi.	1490/1310
SRS-1110-FSC40	SC	SM – 40 km/25 mi.	1310 nm
SRS-1110-FST40	ST	SM – 40 km/25 mi.	1310 nm
SRS-1110-SFP	SFP	<b>Note 1</b>	

**Note 1:** Fiber characteristics will depend on the SFP fiber module selected

**Note:** Please visit Perle's web site for the most up to date Installation guides, models and specifications:

<http://www.perle.com/>

# Installation

These are the steps required to configure the SRS-1110 Gigabit media converter:

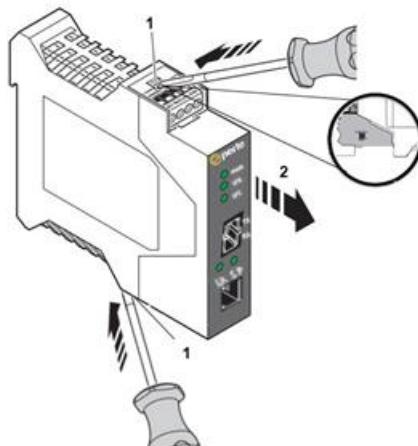

1. Insert SFP Module. (SFP Model only)
2. Set the DIP switch settings. (optional)
3. Install and connect the fiber cable.
4. Install and connect the copper cable.
5. Power up the media converter.

The default switch settings (all switches in the UP position) will work for most installations.

## Accessing the DIP Switches

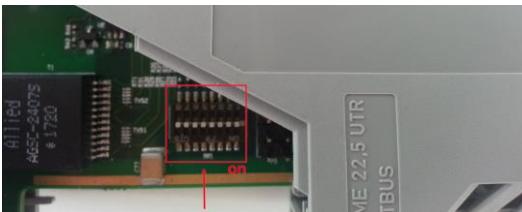

To access the DIP switches:

1. Disconnect the power source.
2. Release both tabs as located in the diagram (Step 1).
3. Gently slide the case open to expose the DIP switches (Step 2).
4. Slide the case open about 1/3 of the way until you hear an audible click. Do not force the case completely open.

# Setting the DIP Switches

Set the DIP Switches accordingly, and then slide the case together until you hear an audible click.

<b>1</b>	<b>SGMII Mode</b>
<b>2</b>	<b>Auto Negotiation</b>
<b>3</b>	<b>Smart Link Pass-Through</b>
<b>4</b>	<b>Fiber Fault Alert</b>
<b>5</b>	<b>Duplex Mode</b>
<b>6</b>	<b>Copper Speed</b>
<b>7</b>	<b>Fiber Negotiation / Fiber Duplex</b>
<b>8</b>	<b>Loopback</b>

# DIP Switch Settings

## SGMII Mode (Switch 1) (SFP models only)

Switch Position	Mode
Up (default)	100/1000
Down	SGMII (SFP)

**100/1000:** In this mode, the fiber characteristics will depend on the SFP inserted.

**SGMII (SFP):** In this mode, the SFP transceiver port is able to operate with SFP's that utilize an SGMII interface.

## Auto Negotiation (Switch 2)

Switch Position	Mode
Up (default)	On
Down	Off

**On:** In this mode of operation the media converter will negotiate Ethernet parameters on both the copper and the fiber connection. This will ensure the most optimal connection parameters will be in effect. If connecting to another Perle Gigabit Media Converter, this switch should be set to On.

**Off:** Auto Negotiation should only be turned off, if the copper link partner does not support link negotiations.

When the Auto Negotiation switch is set to the Off position, the media converter will not negotiate the Ethernet parameters with the copper link partner. The parameters used by the media converter will be determined by the Duplex Mode (switch 5) and Copper Speed (switch 6) switch settings.

## Smart Link Pass-Through (Switch 3)

Switch Position	Mode
Up (default)	Disable
Down	Enable

**Disable:** In this mode (if Auto Negotiation is set to Off), the links on the fiber and copper sides can be brought up and down independently of each other. A loss of link on either the fiber link or copper link can take place without affecting the other connection.

However, if the Auto Negotiation (Switch 2) is set to On, then a loss of link on the copper side will result in a loss of link on the fiber side but not vice versa.

**Enable:** In this mode, the link state on one connection is directly reflected through the media converter to the other connection. If link is lost on one of the connections, then the other link will be brought down by the media converter.

If the installation has a media converter on both ends of the fiber link and both are setup for Smart Link Pass-Through, then a loss of copper link on the far end device will propagate through both media converters and will result in a loss of link at the near end device. This would, therefore, resemble a direct copper connection.

## Fiber Fault Alert (Switch 4)

Switch Position	Mode
Up (default)	Enabled
Down	Disabled

**Enabled:** In this mode, if the media converter detects a loss of fiber signal on the fiber receiver, it will immediately disable its fiber transmitter signal. This, in effect, notifies the fiber link partner that an error condition exists on the fiber connection.

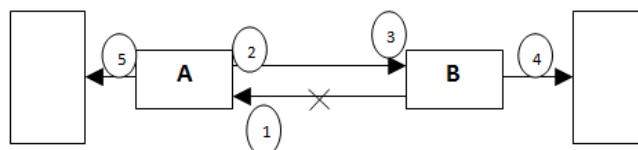

If the remote media converter is set up for Fiber Fault Alert (FFA) Enabled and the local media converter is set up with Smart Link Pass-Through, a loss of fiber link on either the transmit or receive line will be passed through to the local copper connection thus notifying the connected device.

If the media converter has been set to Smart Link Pass-Through mode, the effect will be the same as FFA, since the link loss on the fiber receiver will result in bringing down the copper link, which will in turn cause the transmit fiber link to be brought down.

Note: This feature only takes effect if Fiber Negotiation has been turned off.

**Disabled:** In this mode, the media converter will not monitor for fiber fault.

The following diagram is an illustration of the operation of this feature.

(A) – Remote Media Converter setup for Fiber Fault Alert Enabled, Fiber Negotiation – OFF and Link Mode – Normal.

(B) – Local Media Converter setup for Smart Link Pass-Through and Fiber Negotiation - OFF

- (A) loses fiber connection on its receiver
- (A) disables fiber transmitter
- (B) detects loss of link in its fiber receiver
- (B) drops link on copper connection through Smart Link Pass-Through
- (A) Link on copper connection is not affected

## Duplex Mode (Switch 5)

Switch Position	Mode
Up (default)	Full
Down	Half

*Note: When Auto Negotiation (SW2) is set to Off, the media converter will use this Duplex setting for its copper connection.*

**Full:** In the Up switch position; the media converter will be set to Full Duplex mode.

**Half:** The media converter will be set to Half Duplex mode.

## Copper Speed (Switch 6)

Switch Position	Mode
Up (default)	100
Down	10

*Note When Auto Negotiation (SW2) is set to Off, the media converter will use this switch setting for its Ethernet copper speed connection.*

**100:** When switch 6 is in the Up position, the S-1110 will force the speed to 100 Mbps.

**10:** When switch 6 is in the Down position the media converter will force the speed to 10 Mbps.

## Fiber Negotiation (Switch 7) Gigabit fiber only

Switch Position	Mode
Up (default)	Auto
Down	Off

**Auto:** The Media Converter will negotiate Ethernet parameters on the fiber connection. This will ensure that the most optimal connection parameters will be in effect. If connecting to another Perle Media Converter, this parameter should be set to Auto. The Media Converter Module will advertise 1000Mbps, Full and Half Duplex, no Pause.

**Off:** The Media Converter Module's fiber will be fixed to 1000Mbps, Full Duplex.

## Fiber Duplex (Switch 7) Fast fiber only

Switch Position	Mode
Up (default)	Full
Down	Half

**Full:** The Media Converter Module will be set to Full Duplex mode on its fiber link.

**Half:** The Media Converter Module will be set to Half Duplex mode on its fiber link.

## Loopback (Switch 8)

Switch Position	Mode
Up (default)	Disabled
Down	Enabled

**Disabled:** In this mode, the loopback feature is disabled. This is the normal position for regular operation. The switch must be set to this position for data to pass through the media converter.

**Enabled:** In this mode, test mode is enabled. All data received on the receive (RX) fiber connection is looped back to the transmit (TX) fiber connection. The state of the copper is not relevant and no data or link status is passed through to the copper side.

## Installing the SFP Fiber Module

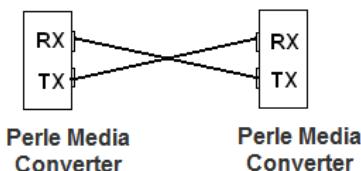

The SRS-1110-SFP requires an SFP fiber module.

1. Locate your fiber module, and then insert the module into the transceiver opening.
2. Ensure the SFP module is properly seated.
3. The SFP module may be inserted before or after applying power to the media converter.
4. Proceed with cable connections.

## Installing the Duplex Fiber Cable

- Locate a 1000Base-X compliant duplex (2 strands) fiber cable with male connections.

- Connect the fiber cables from one media converter to the other media converter/switch/fiber device ensuring that the RX and TX are reversed at the opposite end.

## Installing the Simplex Fiber Cable

Locate a 1000Base-X compliant simplex (1 strand) fiber cable with male connections.

Connect the fiber cable from one media converter to the other media converter/switch/fiber device.

## Installing the Copper Cable

- Locate 1000Base-TX compliant copper cables with male, RJ45 connectors installed at both ends.
- Connect the RJ45 cable between the Perle media converter and the device.

**Note:** The Perle media converter supports Auto-MDI-X, either a straight-through or cross over Ethernet cable may be used.

## Connecting the Terminal Block

The terminal block provides two power inputs. Both power inputs can be connected to the SRS-1110 to provide redundant power. If one power supply should fail the SRS-1110 will use the other power supply to continue to power the unit without interruption. Wiring with suitable temperature ratings must be used. Use copper conductors only.

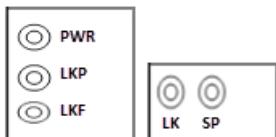

1. Ensure the power source is off prior to connection.
2. Strip both (12-20AWG) wires 7-8 mm(5/16th).
3. Loosen the terminal block screws and connect positive (+)/negative (-) wires into the +/- terminals.
4. Tighten terminal screws (0.5Nm torque). Ensure the wires are securely fastened.
5. If desired, connect P2 (power source 2, beginning at Step 1).
6. Turn on the power at source.
7. Check that the PWR LED light is lit.
8. Ensure that there is one individual conductor for each clamping point.

# Operation

## Status LEDs

The SRS-1110 Gigabit Media converters status LEDs are located on the front panel of the unit.

### PWR – Power/Test

- **On:** Power is on and the unit is in normal operation mode.
- **Blinking slowly:** the unit is in loopback mode.
- **Blinking quickly:** the unit has a hardware error.

### LKP – LinkPassthrough

- **On:** Copper link is present.
- **Blinking slowly:** Copper link disabled because of fiber link loss.
- **Blinking quickly:** Copper link present and receiving data.
- **Off:** No copper link present.

### LKF – Fiber Link/Activity

- **On:** Fiber link present.
- **Blinking slowly:** Fiber link disabled because of copper link loss.
- **Blinking quickly:** Fiber link present and receiving data.
- **Off:** No fiber link present.

### LK – Copper Link Activity

- **On:** Copper link is present.
- **Blinking quickly:** Copper link present and receiving data.

### SP – 100/1000 Copper Speed

- **Green:** 1000 Mbps
- **Yellow:** 100 Mbps
- **Off:** 10 Mbps

## Other Features

### Default Operating Mode:

In the default operating mode (all switches up), the media converter will auto-negotiate on both the fiber and the copper links at the same time, thus achieving the best end-to-end Ethernet operating parameters. If the fiber link is not present, it will still permit the copper link to be established, but will not negotiate a fiber link if the copper link is not present. Therefore, the device attached to the media converter will not see a loss of link if the fiber connection is lost.

### Auto-MDI-X with Skew Correction:

Auto-MDI-X (automatic medium-dependant interface crossover) detects the signalling on the 1000BASE-T interface to determine the type of cable connected (straight-through or crossover) and automatically configures the connection. The media converter can also correct for wires swapped within a pair.

### Error Recovery:

In certain configurations, and under specific conditions where the media converter brings down a link to convey status, there is potential for a deadlock. Recovery is achieved by momentarily restoring the link to see if the original failure has been resolved. If it has not, the link will be forced down again, however if the original problem has been resolved, the link will be restored.

**Example:** If two converters are setup for FFA. The detection of a fiber link failure (RX) will cause one media converter to disable its fiber transmitter (TX). This in turn will cause the other to do the same, and a deadlock condition has been created. The media converter will periodically turn on its transmitter (TX) to re-start the link and see if the original failure has been resolved. If not, the TX is once again turned off.

# Troubleshooting

## General

- Ensure power is supplied to the media converter.
- Ensure both devices on either end of the fiber are compatible. If using a single fiber connection, ensure that you have both an Upstream (U) and Downstream (D) media converter.
- Ensure all cabling is of the correct type and is in good operating condition.
- For dual-stranded fiber connections, ensure the RX and TX has been reversed between the 2 media converters.

## No connectivity

If unable to get full connectivity with all DIP switches in the UP position, this procedure is recommended for troubleshooting.

### Method 1

1. Turn off Fiber Negotiation (SW2 Down) on both media converters. Leave all other switches UP.
2. Connect the near end device to the copper connection. The LK LED indicates good copper connection. If the LK LED is not lit, then check the copper cable and the attached device.
3. Repeat for the far end device.
4. Connect the fiber cable to both media converters. The LKF LED indicates good fiber connection. If no LKF LED then check the fiber cabling.
5. Return units to desired configuration.

### Method 2:

The fiber connection can also be verified by configuring the remote media converter for loopback mode. The LKF LEDs on both media converters should be lit. Data should pass through the local converter, over the fiber connection to the remote media converter. At the remote media converter, the data will be looped back and passed through the fiber, once again, to pass through the local converter to the copper link.

# Technical Specifications

The following applies to all SRS-1110 media converters.

Input Supply Voltage	9.6-60VDC 0.4A max, unregulated (12/24/48-VDC nominal)
Power Consumption	2.4 watts
Operating Temperature	-10°C - 60°C (14°F - 140°F)
Storage Temperature:	-40°C - 85°C (-40°F - 185°F)
Operating Temperature (XT)	-40°C - 75°C (-40°F - 167°F)
Storage Temperature (XT)	-40°C - 85°C (-40°F - 185°F)
Operating Humidity:	5% to 90% non-condensing
Storage Humidity:	5% to 95% non-condensing
Operating Altitude:	Up to 3,048 m (10,000 ft.)
Weight:	0.12kg
Dimensions SC	114 x 100 x 22.5 mm
ST	126 x 100 x 22.5 mm
SFP	117 x 100 x 22.5 mm
<b>Rated Cable Temperature</b>	
Rated Cable Temp. ≥ 80°C at 75°C for SRS-1110-SFP(-XT)

## Fiber Cabling Requirements:

**MM:** 50/125 microns or 62.5/125 microns

**SM:** 9/125 microns

## Ethernet Copper Cabling Requirements

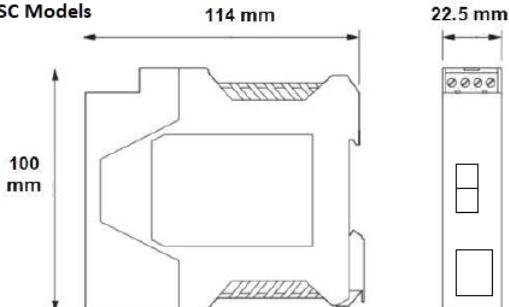

- Category 5e UTP or STP
- Straight through or Ethernet crossover

**Note:** Please refer the product page on the Perle website for the most up to date specifications.

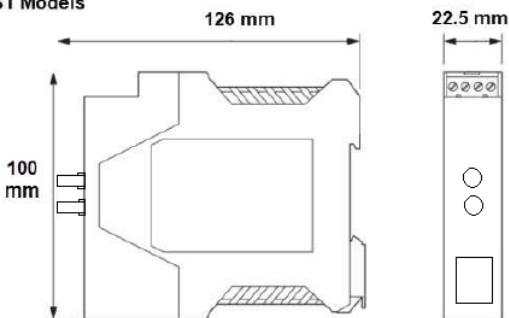

<http://www.perle.com/>

# Mechanical Drawings

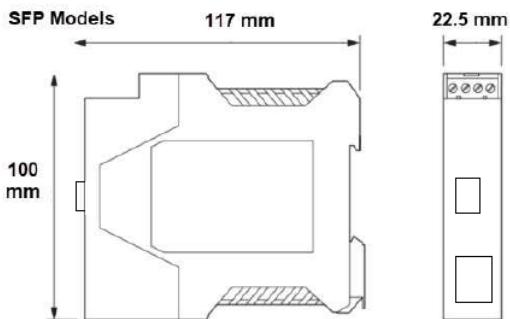

**SC Models**

**ST Models**

**SFP Models**

## Connecting the SRS-1110 to a DIN Rail

The DIN Rail clip will be attached to the SRS-1110.

### Mounting the SRS-1110 on a DIN Rail

1. Position the SRS-1110 so that the top hooks of the DIN Rail clip attach onto the top of the DIN Rail.
2. Rotate the bottom of the SRS-1110 towards the rail. This will snap the bottom hooks of the DIN Rail clip onto the bottom of the DIN Rail.

### Removing the SRS-1110 from the DIN Rail

The DIN Rail attachment clip has a slot at the bottom of the latch that is visible beneath the SRS-1110 when it is mounted.

1. Insert a flat blade screwdriver into the slot and twist the base to release the clip. Alternatively, a downward force on the clip will release the clip.
2. When the clip is released, pull the bottom of the SRS-1110 out slightly and remove the SRS-1110 from the DIN Rail.

## Connecting the SRS-1110 to a TBUS

An optional ME22,5TBUS1,5/4P1S connector can be purchased for the SRS-1110. See <http://www.perle.com/> for more information.

The DIN Rail connector is an alternative method of connecting a power supply which supports this connection method.

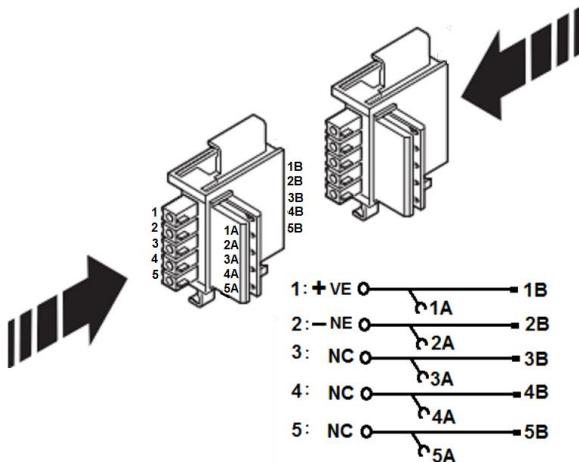

### Warning:

Power sources must be off prior to making any TBUS connections.

Power sources must be off prior to making any cable connections to the SRS-1110 unit.

1. Install the TBUS connectors by snapping them onto the DIN rail.
2. Slide the TBUS connectors together as shown in (as shown in Figure 1) to create an electrical connection.
3. Install the media converter onto the DIN Rail overtop one of the TBUS connections, ensuring that the TBUS extension connects into the media converters TBUS slot.
4. Repeat the procedure for the power supply.

**Figure 1**

THE SPECIFICATIONS AND INFORMATION REGARDING THE PRODUCTS IN THIS GUIDE ARE SUBJECT TO CHANGE WITHOUT NOTICE. ALL STATEMENTS, INFORMATION, AND RECOMMENDATIONS IN THIS GUIDE ARE BELIEVED TO BE ACCURATE BUT ARE PRESENTED WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED. USERS MUST TAKE FULL RESPONSIBILITY FOR THEIR APPLICATION OF ANY PRODUCTS.

This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio-frequency energy and, if not installed and used in accordance with this hardware guide may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case users will be required to correct the interference at their own expense.

Modifications to this product not authorized by Perle could void the FCC approval and negate your authority to operate the product.

Perle reserves the right to make changes without further notice, to any products to improve reliability, function, or design.
